

CIELAB HLC Colour Atlas XL

Farbwerte-Tabellen / *Colour Value Tables*

Version 1.0

Der freieFarbe e.V. stellt die Autoren der DIN SPEC (PAS) 16699 «Offene Farbkommunikation», nach der wir den HLC-Farbatlas produzieren.

Der freieFarbe e.V. ist Mitglied im DIN.

The HLC Colour Atlas is produced according to the DIN SPEC (PAS) 16699 "Open Colour Communication" which has been authored by members of freieFarbe e.V., a registered non-profit association that itself is a member of DIN, the German Standards Institute.

Farbwerte-Tabellen

Die Tabellen zeigen die wichtigsten Alternativ-Farbwerte der Farbtöne des *HLC Colour Atlas XL* für den häufigen Fall, dass in der verwendeten Software keine Lab-Farbeingabe zur Verfügung steht.

CMYK: ISO Coated v2 300% (ECI)

Diese Werte (0–100%) sind zu verwenden bei Dateien für den Offsetdruck auf gestrichenen Papieren, sofern die Software CMYK-Daten verarbeiten kann.

RGB: sRGB (IEC 61966-2.1)

Diese Werte (0–255) sind zu verwenden für alle anderen Ausgabesituationen. Hex ist eine vereinfachte Schreibweise, welche z.B. im Webdesign gebräuchlich ist.

Falls keine RGB- oder CMYK-Farbwerte eingetragen sind, liegt der Farbton außerhalb des betreffenden Gamuts. Verwenden Sie dann einen Alternativfarbton, der noch im Gamut liegt.

Sortierung

Die Farbwerte sind in Leserichtung bezüglich der Farbfeld-Tafeln sortiert (von links nach rechts und von oben nach unten).

Ohne Gewähr

Trotz sorgfältiger Vorbereitung und ausgiebiger Tests können in den Farbwerten noch Fehler enthalten sein. Eine Garantie für die Richtigkeit und jegliche Haftung für Anwendungsfolgen wird ausgeschlossen.

Colour Value Tables

The tables show the most important alternative colour values of the *HLC Colour Atlas XL* swatches for the frequent case that Lab colour input is not available in the software used.

CMYK: ISO Coated v2 300% (ECI)

These values (0–100%) are to be used for files for offset printing on coated paper, provided the software can process CMYK data.

RGB: sRGB (IEC 61966-2.1)

These values (0–255) are to be used for all other output situations. Hex is a simplified notation, which is used e.g. in web design.

If no RGB or CMYK colour values are listed, the colour is outside the gamut in question. In this case use an alternative color tone that is still in the gamut.

Sorting

The colour values are sorted in reading direction with respect to the colour swatch tables (from left to right and from top to bottom).

Without guarantee

Despite careful preparation and extensive testing, the colour values may still contain errors. A guarantee for the correctness or any liability for application consequences are excluded.
